

Welcome to Your MacBook Neo

Your MacBook is enrolled in McKinnon Secondary College's device management system. This helps the school keep it secure, up to date, and configured with the apps and settings you need for class while it's still yours to use day to day.

In this guide we'll outline some important information about the MacBook Neo's Warranty, AppleCare+ insurance, device management, data backup and apps that can be installed.

Important Warranty and AppleCare+ Information

You may have already received an email from our vendor partner about purchasing AppleCare+ insurance for your MacBook Neo. Please check your parents and your own emails for information on making this purchase. It will be sent five days after the purchase of the device.

While your device has a limited manufacturer warranty for defects, AppleCare+ covers accidental damage with an excess depending on what needs to be repaired. A general guide on what is covered under AppleCare+ below.

The school strongly advises parents to purchase AppleCare+ insurance for your child's MacBook Neo. This will significantly reduce costs in the event the device is damaged. Keeping the device in good condition will mean it will last for many years beyond their time at McKinnon Secondary College.

Standard Apple Warranty (included at no cost)

Every MacBook Neo includes 1 year of hardware warranty (manufacturing defects under normal use), technical support from McKinnon IT and our repair partner, and additional guarantees under Australian Consumer Law. Accidental damage, drops, spills, cracked screens are not covered under warranty.

AppleCare+ Insurance

AppleCare+ extends coverage to 3 years from activation and adds accidental damage repairs (drops, spills, cracked screens, each with an excess fee) and battery coverage if capacity drops below 80%.

Typical Repair Fees

Damage Type	Excess
Screen-only or enclosure-only	\$79
Other accidental damage	\$249

Pricing is set by Apple and subject to change.

How the fee is worked out

The \$79 fee applies when damage is limited to **one** area — the display, or the external aluminium enclosure (top/bottom case or display lid). The \$249 fee applies when damage extends beyond that into other components, regardless of how it happened.

Screen/enclosure-only (\$79): cracked display with everything else working; cosmetic dents/scratches; bent lid with no internal damage.

Other damage (\$249): liquid damage; motherboard/logic board damage; USB-C port damage; accidental keyboard/trackpad damage; cracked display plus bent hinge/chassis damage; internal damage from a significant impact.

McKinnon MacBook Neo Device Management

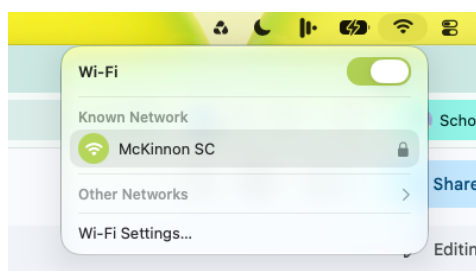

Every MacBook Neo is enrolled in McKinnon Secondary College's device management platform, Mosyle. This means the school can remotely keep your MacBook Neo secure and up to date. Core software like Chrome and Google Drive is installed and updated automatically, and students sign in with their school Google account so the device is tied to their school identity from the start.

A handful of settings are locked down for consistency and safety, including personal Apple ID/iCloud sign-in and the creation of new VPN configurations, but day to day the laptop remains fully usable as the student's own device.

First Steps

Connecting to WiFi

Your MacBook Neo is able to connect to your home WiFi network using the icon in the top menu bar. When at school it will automatically connect to the school's "McKinnon SC" WiFi network. If you experience any difficulty connecting, try turning the WiFi off and on. That often will help get you connected.

Sign into Google Chrome

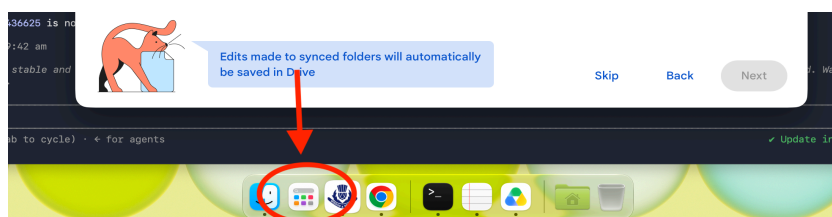

The first thing you should do is open up Google Chrome and sign into your McKinnon school account. This works just like your Chromebook, just login and when asked to sync your data, click "I'm In".

Please be aware, you cannot create a Google Chrome profile with any other Google account. You can still login to a non-Mckinnon Google account within your school Chrome profile.

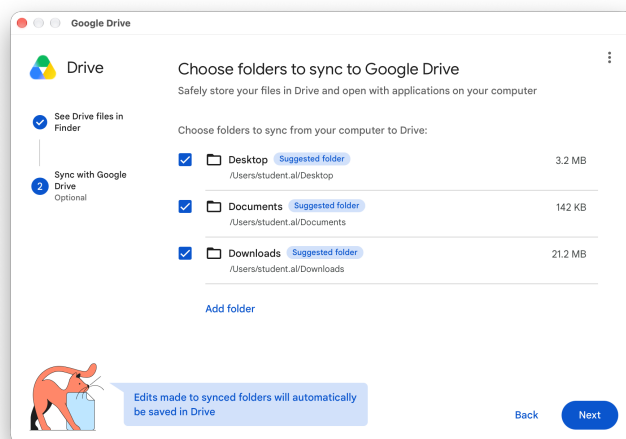

Backing Up Your Data

Your MacBook Neo has 256 gigabytes of local storage. This data is not backed up by default. You are encouraged to set up **Google Drive Desktop** to automatically backup your data. You can do this by following the step below.

- Press the Apps icon on the dock, search for "**Google Drive**" and click it to open.

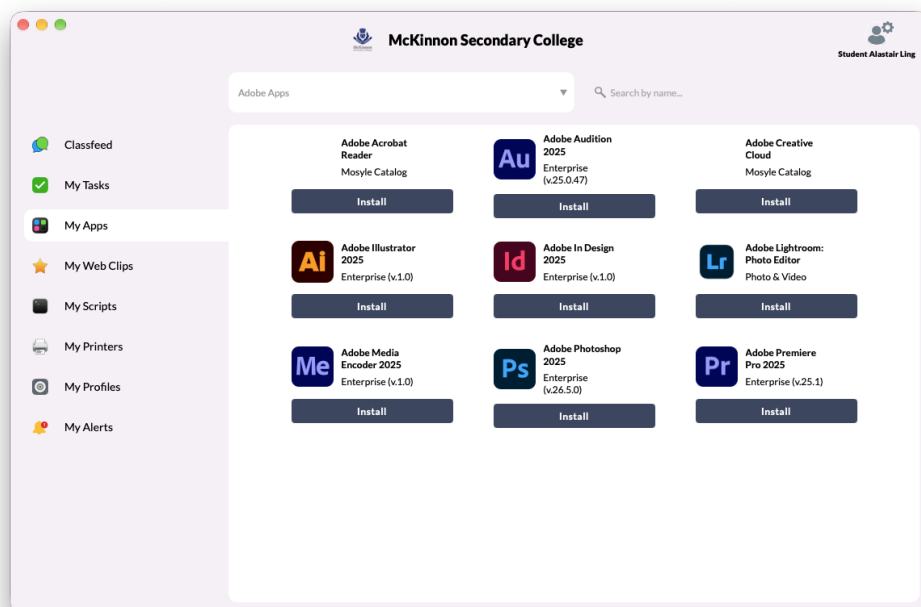

- The Google Drive app will walk you through logging in. If you see any popup question about accessing features or data, press "**Allow**".
- You'll use Google Chrome to confirm that you're signing into your school Google account.
- You'll see a screen like the one below asking which folders to sync automatically. It's a good idea to select all of them and add any others by clicking "**Add folder**". It will ask for access to these folders each time you select them. Click "**Allow**" when it asks.

- We suggest adding your **Movies**, **Music** and **Pictures** folder to automatically sync. You can edit these settings later if you're unsure.

Mac Applications

Applications on the MacBook Neo are deployed and kept current through **Manager** app rather than the App Store or manual installation. Because this happens at the management level, you don't need admin rights or app store logins to get the software you need for class. There are already a number of great apps to install.

We're committed to adding more useful apps. If you have a suggestion you can use the link below to submit it via our Google Form.

<https://mckinnon.sc/apprequest>

Software Updates

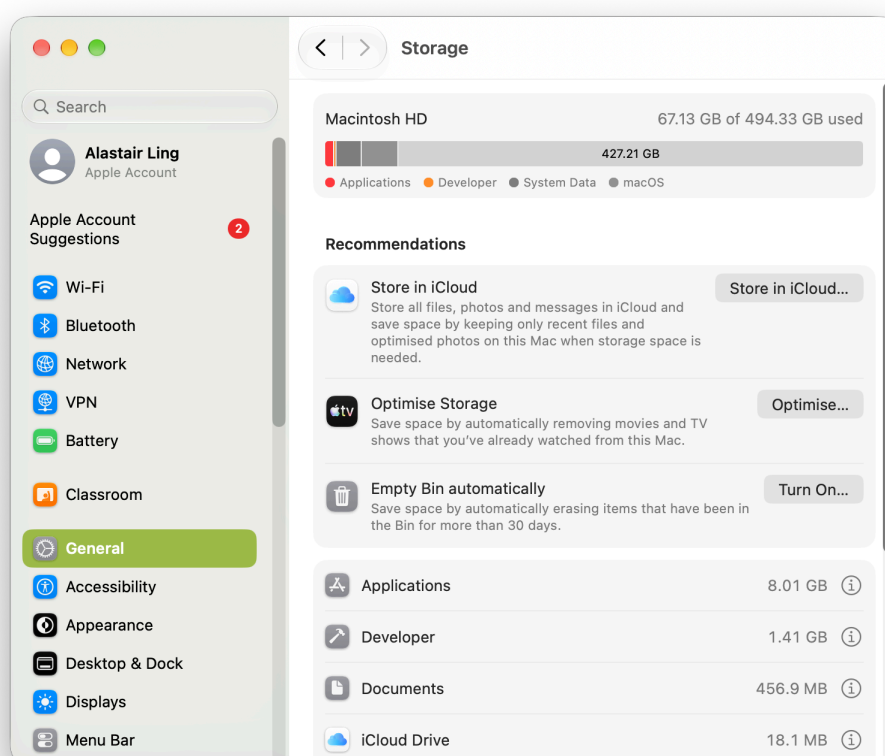

Most if not all your apps will update themselves when needed. Major MacOS updates will be scheduled to install on your MacBook Neo during holiday periods. You will see a notification to update with a deadline date midway through the holiday period. You can initiate the update yourself anytime during this time. The update will automatically install at 1:00AM on the deadline date if you do not do it yourself. We cannot guarantee that you will not lose any data if you let the update reach the deadline.

Using Your Schools Account with Adobe Apps and Microsoft Office 365

If you install any Adobe Creative Cloud apps or Microsoft Office 365 apps, you will need to login to them using your @schools.vic.edu.au account. If you're unsure what these account details are, please reach out to the IT Help Desk for assistance via help@mckinnonsc.vic.edu.au

Checking your MacBook Neo Storage

You have 256 gigabytes of internal device storage on your MacBook Neo. While it's much more than your old Chromebook, it's not a huge amount of storage overall. You can get an overview and manage your storage by going to **System Settings, General, Storage**.

Getting Help

If you have any questions or are having technical difficulties with your MacBook, we're here to help. You can visit the IT Help Desk for in person assistance at each campus, or you can email help@mckinnonsc.vic.edu.au with any questions.
